(54) Title: PRINTING DEVICE FOR PRINTING CONICAL OBJECTS

(57) Abstract: The invention relates to a device for printing conical objects (5) comprising a printing member having one or a number of successive printing plates (25) or printing cloths (21), a driving mechanism for the printing member, one or more printing units (16) for applying printing ink and one or more counterpressure members on which the conical objects (5) are held and supported during printing, the surface of the printing member onto which printing plates or printing cloths are applied having at least the inner or outer surface of a circular cone and such ratios being provided that the circumferential velocities of printing member and the conical object to be printed are identical or almost identical to one another on every point of the line of contact between them.
